KAVISHRI SENGUTTUVAN

github.com/kavishri-23 · kavishri2307@gmail.com · linkedin.com/in/kavishrisenguttuvan

Summary

CS undergraduate (expected 2027) and Backend Developer Intern at Xcel Corp, building authentication infrastructure (email OTP, MFA, secrets management) for a conversational AI platform. Skilled in Python, FastAPI, SQL, and RAG with ChromaDB and Ollama.

Technical Skills

Languages: Python, Java, SQL, JavaScript
Databases: MySQL, SQLite, ChromaDB
Tools: Git, GitHub, VS Code, Kali Linux
Frontend (basic): HTML, CSS, React
Backend: FastAPI, REST APIs, JDBC, JWT, OTP/MFA
AI/LLM: RAG, Ollama
Core: OOP, DBMS, Data Structures & Algorithms

Experience

Backend Developer Intern, Xcel Corp — Aug 2026 — Present

- Built a shared email dispatch service in Python to send OTP codes for user registration and login MFA on a conversational AI platform.
- Created HTML and plain-text email templates for registration verification and login OTP emails.
- Managed JWT secret keys, database URLs, and email credentials through environment variables, keeping secrets out of source code.

Projects

AI Knowledge Assistant | Python, ChromaDB, Ollama

https://github.com/kavishri-23/ai-knowledge-assistant

- Developed a PDF-based question-answering system using Retrieval-Augmented Generation (RAG) to retrieve relevant information from documents.
- Implemented vector search to identify relevant passages and generate answers with source text and page numbers for verification.

Healthcare and Safety Management System | Java, JDBC, MySQL

https://github.com/kavishri-23/Healthcare-Appointment-Emergency-Priority-Management-System

- Developed a database-driven application to manage healthcare records and appointment-related information.
- Integrated Java with MySQL using JDBC to support database operations and structured data management.

Personal Finance Manager | Python, SQLite

https://github.com/kavishri-23/personal-finance-manager

- Developed a personal finance application to record, categorize, and manage income and expenses using Python and SQLite.
- Implemented persistent data storage to maintain financial records and support expense tracking and financial summaries.

Honeypot-Based Intrusion Detection System | Kali Linux

- Explored honeypot-based intrusion detection to understand cybersecurity threats and suspicious network activity.
- Investigated how honeypots can capture potential attack attempts and support security monitoring

Education

B.E. in Computer Science Engineering (IoT and Cybersecurity with Blockchain Development), T. John Institute of Technology, Bangalore — 2023 — Expected 2027

Certifications

NPTEL: Practical Cyber Security for Practitioners (Elite Silver); Data Structures and Algorithms using Java
Udemy: Database Management System (DBMS) |
Microsoft: Azure AI Fundamentals

Achievements

Ideathon Rural Skyline, 2nd place: Proposed a satellite-based solution to provide internet connectivity to underserved rural areas.
